

JISHNU A.

AI / ML Engineer

+91 8921951948 | aniljishnu07@gmail.com | [LinkedIn](#) | [GitHub](#) | Kerala, India

PROFESSIONAL SUMMARY

Results-driven AI/ML Engineer (MCA, Amrita University) who ships production-grade models — not just notebooks. Delivered an 80% accurate computer vision system and 18–22% ROC-AUC lifts on imbalanced datasets within weeks of project kick-off. Skilled in the full ML lifecycle: data engineering → model training → REST API deployment → monitoring. Seeking a service-based environment to solve client-facing AI problems at scale.

TECHNICAL SKILLS

Languages	Python · JavaScript · SQL
ML / DL	PyTorch · TensorFlow · Keras · Scikit-learn · CNN · LSTM · Transfer Learning
NLP & Gen AI	Hugging Face Transformers · LLM · RAG · Prompt Engineering · Text Classification
Computer Vision	ResNet · OpenCV · Image Classification · Data Augmentation
Backend / APIs	FastAPI · REST API design · real-time inference services
MLOps & Tools	MLflow · Docker (basic) · Azure · Git · Jupyter
Data Eng.	Data Cleaning · ETL Pipelines · Imbalanced-dataset handling
Frontend	React.js · Tailwind CSS

PROJECTS

ATS Resume Screening System [Git Repo](#)

May 2026 – Present

- Engineered an NLP pipeline using Hugging Face Transformers to parse, rank, and score resumes against job descriptions — targeting sub-2s latency per document at scale.
- Designed a modular RAG architecture enabling recruiters to query candidate pools in natural language, reducing manual shortlisting effort by an estimated 60%.
- Built a FastAPI microservice with async endpoints, enabling concurrent screening of 50+ resumes per batch without blocking.

Car Damage Detection — ResNet / PyTorch [Git Repo](#) [Live Demo](#)

Apr 2026

- Achieved 80% validation accuracy on a real-world vehicle damage dataset by fine-tuning a pre-trained ResNet-50 with custom classification heads — outperforming a baseline CNN by 14 percentage points.
- Reduced overfitting by ~20% through a targeted augmentation strategy (random crops, colour jitter, horizontal flips) on a dataset with high class imbalance.
- Deployed a Streamlit app that processes uploaded images end-to-end in <3 seconds, making the model immediately usable by non-technical stakeholders.

Credit Risk Prediction — Ensemble Models [Git Repo](#)

2025

- Lifted ROC-AUC by 18–22% over the baseline by replacing a single Logistic Regression model with a tuned XGBoost + Random Forest ensemble on a severely imbalanced dataset (SMOTE + class-weight correction).
- Reduced false-negative rate by 30% — critical for a lending context — through systematic threshold optimisation tracked in MLflow across 40+ experiment runs.
- Exposed the trained model as a FastAPI REST service, cutting average inference time to 120 ms per request and enabling live credit-decisioning integration.

WORK EXPERIENCE

Web Developer · Meril Life Science

Oct 2024 – Nov 2025

- Delivered 3 production React.js features using Tailwind CSS under Agile sprints, each shipped on schedule and adopted by 500+ internal users.
- Reduced UI bug backlog by 40% by introducing component-level testing conventions adopted across the frontend team.
- Collaborated cross-functionally with product managers and backend engineers to translate business requirements into pixel-accurate interfaces.

EDUCATION

Master of Computer Applications (MCA) · Amrita University

2024 – 2026

Relevant coursework: Machine Learning · Deep Learning · Natural Language Processing · Data Structures & Algorithms · Cloud Computing

CERTIFICATIONS & RECOGNITION

- › Actively pursuing AWS Certified Machine Learning – Specialty (expected Q3 2026).
- › Portfolio: All projects maintained on GitHub with reproducible environments, documentation, and model cards.
